

**Measure your sustainability.
Child's play.**

The TenP Platform helps you to overcome sustainability's new challenges together with your suppliers.

Sustainability is a great and indispensable challenge for the future, but it requires from firms both considerable resources and constant commitment. For this reason, the Global Compact Network Italy Foundation has developed TenP, a platform that provides companies with a twofold advantage: to be able to self-evaluate in a simple and transparent manner regarding sustainability and to monitor their suppliers' performance. The TenP Platform was created from the ten principles of the United Nations Global Compact, and focuses on Human Rights, Labour, the Environment and the Fight against Corruption, while taking into account the most relevant international standards and conventions regarding sustainability. **Become a partner of the TenP Platform and help your suppliers grow with you.**
